CASE STUDY · DATA & GROWTH ENGINEER

Dental Bright → Norway

Three Google Search campaigns to €1k/day at 1.5× ROAS

€63k
NL spend analyzed

2,993
unique search terms

2.72×
current NL ROAS

€59
blended AOV

Danil Sysenko · April 2026

TL;DR

€14.4k over four weeks → €24.9k revenue. 1.74× blended, W2 dips before it scales.

01

Problem-Aware

30% of budget · **2.87×** NL benchmark

Symptom queries: bad breath, tartar, gum issues. Cheapest CPC, hottest intent.

02

Solution-Aware

55% of budget · **3.09×** NL benchmark

Category queries: tannpulver, tannpleie, tannstein fjerning. Volume + highest ROAS.

03

DSA Discovery

15% of budget · **~1.8×** NL benchmark

Dynamic Search Ads on landing pages. Finds NO-specific queries our translation misses.

Path to target

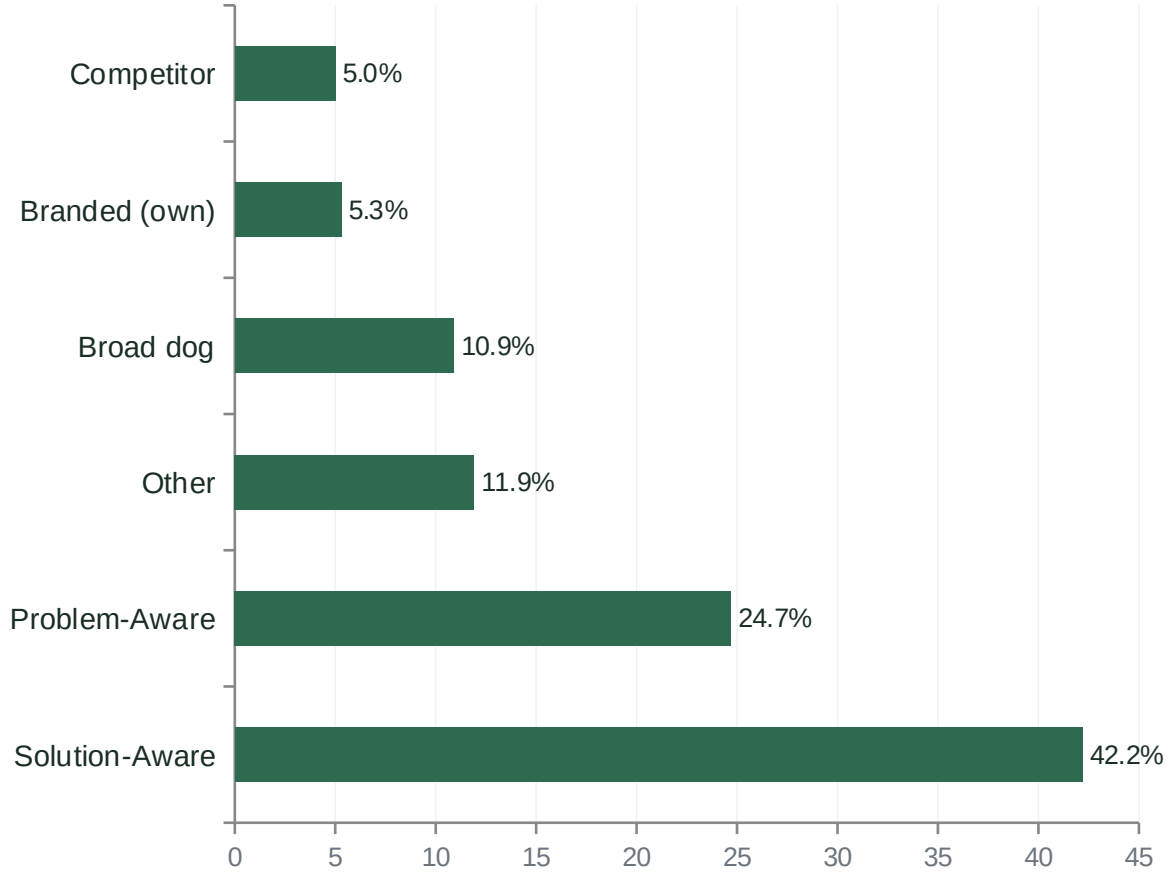
Week 1	Week 2	Week 3	Week 4
€150/day	**€300/day**	**€600/day**	**€1000/day**
ROAS 1.50×	ROAS 1.42×	ROAS 1.73×	ROAS 1.87×

Built in a weekend without a Norwegian speaker to verify keywords. Campaign 3 (DSA) exists partly to catch what my translation misses.

What the NL data says

I grouped 2,993 search terms into 6 intent clusters. Two drive three-quarters of revenue.

Spend share and ROAS by cluster



Cluster performance (6 months, NL)

Cluster	Spend	Revenue	ROAS	CPC	CVR
Solution-Aware	€26,636	€82,282	**3.09×**	€1.22	6.5%
Problem-Aware	€15,596	€44,730	**2.87×**	€0.94	4.8%
Other	€7,535	€15,465	2.05×	€1.67	5.5%
Broad dog	€6,881	€15,087	2.19×	€1.54	5.4%
Branded (Beemzy)	€3,366	€8,424	2.50×	€1.37	5.2%
Competitor	€3,134	€5,564	**1.78×**	€1.86	5.3%

Key insight. Solution + Problem = **67% of NL spend, 74% of NL revenue**. Competitor has the worst ROAS (1.78×) — expected to be worse in NO without brand trust. Branded won't exist in NO yet.

Norway: market and unit economics

Explicit assumptions — every number is adjustable with Week 1 real data.

Market context

POPULATION

5.55M

~20% dog-owning households → ~560k dogs

LANGUAGE

Bokmål

~90% of searches; Nynorsk covered via broad match

TOP PET E-TAIL

zooplus.no

then musti.no, buddy.no, dyrelege.no

COMPETITOR DENSITY

Low–Medium

Plaque Off, DentaLife present; natural powder = white space

Unit economics (NO vs NL baseline)

CPC

€1.45

NL €1.22 **+20%**

Cold market, Nordic auction density

CVR

4.20%

NL 5.66% **−25%**

No brand trust yet; improves W3-4

AOV

€62.00

NL €58.83 **+5%**

Nordic price index uplift

Target ROAS

1.50×

NL 2.72× **min**

Brief target; model lands at 1.81×

Break-even check. At €1k/day and CPC €1.45, we need **CVR ≥ 3.5%** to hit 1.5× ROAS. Baseline assumes 4.2%. Safety buffer holds even if NO CVR is 40% below NL.

CAMPAIGNS 1 & 2

Where the revenue lives

85% of the budget. Both clusters did the heavy lifting in NL — there's no reason Norway should be different.

01

Problem-Aware

They don't know tannpulver exists. They just know the dog stinks.

30% • €300/day · NL: CPC €0.94 · CVR 4.8% · ROAS 2.87×

hund dårlig ånde *bad breath dog*
tannstein hund *tartar dog*
fjerne tannstein hund *remove tartar dog*
hund stinker fra munnen *dog smells from mouth*
betennelse tannkjøtt hund *gum inflammation dog*
hund gule tenner *yellow teeth dog*

STRUCTURE Phrase match. 3 ad groups: breath / tartar / gums.

AD COPY First angle I'd test: "Hunden din stinker fra munnen? Naturlig pulver — ryddig ånde på 14 dager." (A/B against 3 variations)

KILL / SCALE Pause ad group after €200 spend if ROAS < 1.0×

02

Solution-Aware

They know they want a dental product. Bigger volume, higher CVR, slightly more expensive clicks.

55% • €550/day · NL: CPC €1.22 · CVR 6.5% · ROAS 3.09×

tannpulver hund *tooth powder dog*
dental pulver hund *dental powder dog*
beste tannpulver hund *best tooth powder dog*
tannpleie hund *dental care dog*
tannrens hund *teeth cleaning dog*
anti plakk hund *anti plaque dog*

STRUCTURE Phrase match. 3 ad groups: powder / paste-brush / general care.

AD COPY First angle: "Tannpulver for hund — 4.6/5 fra 12 000 anmeldelser. Prøv i 30 dager risikofritt." (trust + risk reversal)

KILL / SCALE tROAS 2.0× from Day 7 · Kill terms under 1.2× ROAS

Landing page for both: /no/dental-bright with Bokmål copy + Trustpilot widget above the fold before launch.

CAMPAIGN 3

DSA: the unknown-unknowns bet

Why this campaign exists.

My Norwegian comes from 4 hours with Google Translate this weekend. If the dominant NO query is actually **"tannrens"** and I bid on **"tannpulver"**, Campaigns 1 and 2 quietly underperform for 3 weeks before anyone notices.

DSA lets Google crawl /no/dental-bright and match queries against the page content. It surfaces the real NO language within 7–10 days. We then promote winners to phrase match and add losers to the negatives list.

It's a 15% budget allocation that de-risks the other 85%.

SPEC

Budget

15% · €150/day, capped

Type

Dynamic Search Ads — no manual keywords

Targets

/no/ homepage
/no/dental-bright PDP
/no/blog/dental-care

Account-level negatives

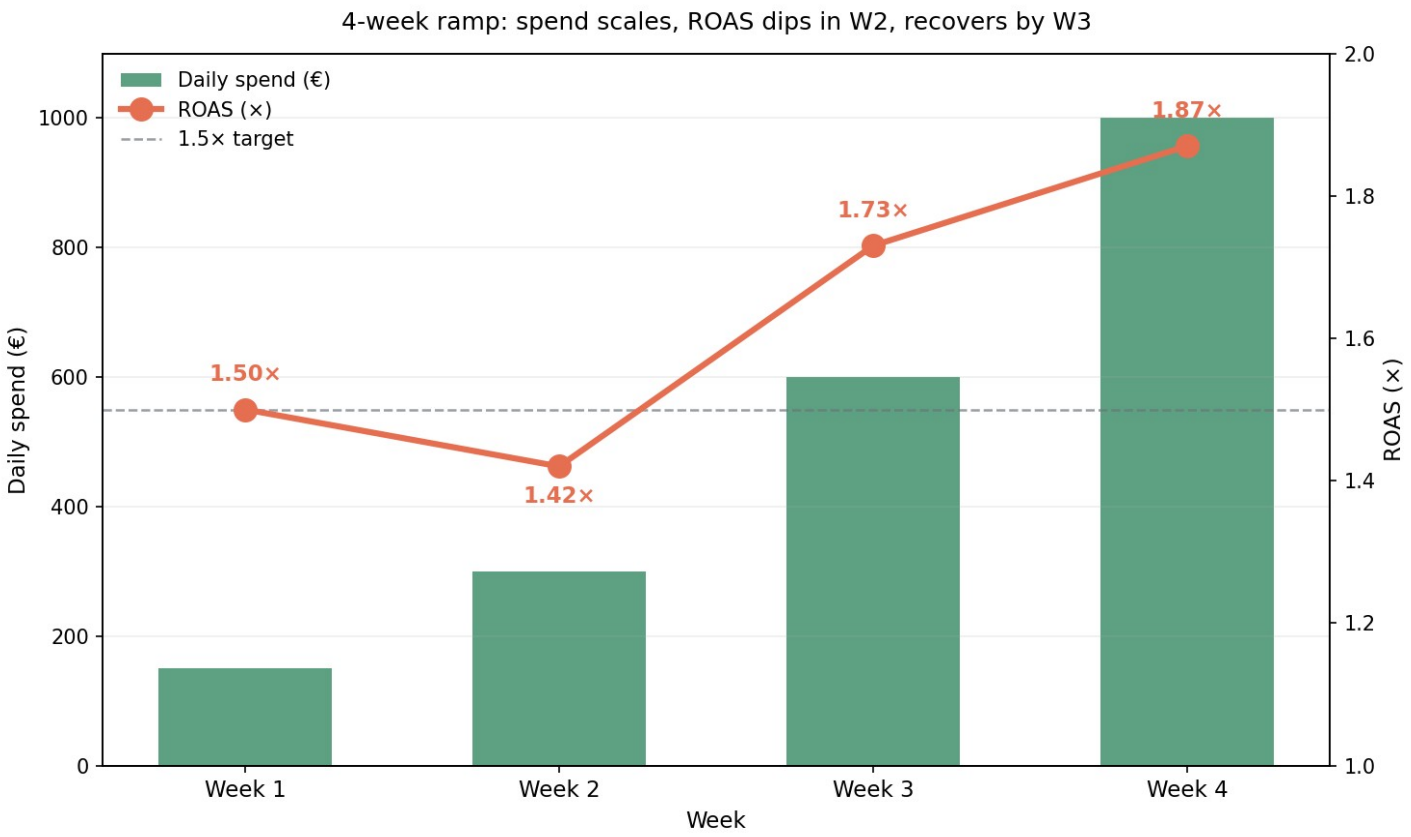
gratis, diy, katt, hest, veterinær, valp trening (+ 8 more)

Ad copy

Google auto-writes headline from page content. Description: "Naturlig tannpulver. 4.6/5."

4-week ramp to €1k/day

€14,350 spend, €24,913 revenue, blended 1.74×. The dip in Week 2 is the plan, not a risk.



Week-by-week

Week	Spend	Rev.	ROAS
W1	€1,050	€1,575	1.50×
W2	€2,100	€2,982	1.42×
W3	€4,200	€7,266	1.73×
W4	**€7,000**	**€13,090**	1.87×
Total	**€14,350**	**€24,913**	**1.74×**

WHY W2 DIPS

W1 runs tight on the 12 highest-intent keywords. W2 we double spend and add long-tail variants to learn — mix shifts toward lower-CVR terms, so ROAS dips even as revenue grows. In W3 we cut what didn't work. Without the dip there's no signal.

Break-even sits at CVR 3.5%. Baseline assumes 4.2% (a 25% haircut vs NL). Even if NO CVR lands 40% below NL we still clear the 1.5× target — which is why the plan starts at €150/day, not €1,000.

What could kill this, and what I'd build first

Three risks I can name. One automation I'd commit to in Week 1. The rest waits until data earns it.

Three things that break it

CVR drops below 3.5%

Landing page isn't localized well enough, or NO users don't trust an unknown brand. Fix: Trustpilot widget above the fold Day 1, first-purchase 20% off in checkout.

CPC inflates above €1.80

Nordic auction heats up, or broad match leaks budget. Fix: strict phrase match from Day 1, tROAS bidding from Day 7 once we have ≥15 conversions for the algo to learn on.

NO search volume caps the plan at €600/day

Norway is 5.5M people. If demand is thinner than I modeled, we hit a ceiling. Fix: Sweden and Denmark next — same pipeline, similar dental-care habits, 3× the combined population.

The one thing I'd build in Week 1

Daily pacing & ROAS Slack bot

Python + Google Ads API + Slack webhook. At 09:00 it posts yesterday's spend, revenue, orders and ROAS broken out by campaign. Red if any campaign is <1.3× ROAS or pacing ±20% off budget. One screenshot per day that replaces a spreadsheet check.

Build time: 1 evening. Saves 15 min/day. Pays for itself Week 1.

WHY NOT A LIST OF FIVE MORE

Search-term harvesting, feed generation, translation pipelines — I have ideas, but automating things I don't have data for yet is how teams build shelfware. These come in Week 4+ once I know what the real failure modes look like.

Full notebook, data, and this deck: **github.com/willbebettertoday/dogsuppy-no-case-study** · *Happy to walk through any slide over coffee.*
